MiX TELEMATICS
MOBILE INFORMATION EXCHANGE

OVERVIEW

For fleet operators today, it's crucial to not only track your vehicles, but to have immediate access to secure information about your drivers and vehicles at all times. MiX Fleet Manager by MiX Telematics is an end-to-end solution designed to give fleet operators the tools they need to sustain a high-performing operation – one that's operating at optimum levels of efficiency and safety.

MiX Fleet Manager comprises an on-board computer, an online tracking and information portal as well as access to valuable fleet and driver reports and analytics. In addition, 24/7/365 customer support is provided throughout the partnership MiX Telematics has with its customers. MiX Fleet Manager includes mobile applications that allow fleet managers to remain connected to their fleet at all times.

HOW DOES IT WORK?

A MiX Telematics on-board computer collects and transmits fleet data including vehicle location, driver identity, driving events, fuel usage as well as distances travelled. Fleet managers then access this information – and obtain key insights about the data – through MiX Fleet Manager's online tracking and information portal. The solution's global service delivery platform is underpinned by a world-class security model.

MiX Fleet Manager provides secure 24-hour access to fleet data, while advanced reporting and analytics tools enable informed decisions to be taken for the overall improvement of a fleet's performance. Data, reports and trends can be generated using MiX Insight Reports and MiX Insight Analyser. Fleet information can be conveniently exported or sent as notifications via email, or even text messages, on a regular basis.

MANAGE YOUR FLEET REMOTELY

MiX Telematics' purpose-designed mobile applications enable fleet managers on the move to keep tabs on their vehicles, drivers and other mobile assets while they are out and about.

The apps support various languages, and are available for iPad and a range of smartphones.

MIXED FLEET WITH MIXED NEEDS?

Many fleet managers with mixed fleets need peace of mind without using multiple systems and services. MiX Fleet Manager provides the right on-board computer for all vehicle types, including heavy goods vehicles, light good vehicles, OBDII-equipped light goods and passenger vehicles, motorcycles and trailers.

Regardless of which on-board computer they have fitted, fleet managers are assured of the same superior level of support across their fleets.

"Per month, our software records around 300 million events, generated from approximately 313 million kilometres driven. Fleet data is accessible 24 hours a day."

BENEFITS

MiX Fleet Manager affords customers access to vehicle and driver information anywhere, anytime. As a result, there are a host of benefits, all translating into increased profitability over time.

Reduce fuel and maintenance costs

MiX Telematics provides a range of reports to enable the monitoring of fuel consumption. However, the key to reducing fuel and maintenance costs is to improve driver behaviour. Vehicles that are driven well perform more efficiently and require less maintenance.

Improve driver safety

MiX Fleet Manager provides customers with all the tools necessary to monitor, manage and improve driver behaviour. These include the MiX Rovi and RIBAS in-cab displays as well as range of scoring and error reports. This combination is highly effective for safety improvement and risk reduction.

Servicing and licencing schedules can be managed efficiently through automated reminders. Reminders can be configured to trigger when the set distance, duration or engine hours have been reached.

Improve utilisation and efficiency

Getting the most from a fleet is the primary concern for any fleet manager. Knowing where vehicles are is only the beginning. MiX Fleet Manager provides operators with activity timelines to illustrate utilisation patterns in their fleets. This assists in boosting efficiency.

Enhance customer service

MiX Fleet Manager includes a find-nearest-vehicle function. It allows a fleet manager to identify the closest vehicle to a customer, send the driver a job and seamlessly route him straight there using the MiX Rovi in-cab navigation and messaging device.

MiX VISION

A highly configurable video recording system that integrates with MiX Fleet Manager. MiX Vision simultaneously captures video footage of the driver and his view of the road. The video solution includes a tamper-resistant camera unit that is attached to the inside of the vehicle's windscreen.

When an event occurs the system triggers the automatic upload of two 15-second low-resolution video clips, one showing the driver and one showing the road.The integration of video brings telematics data to life.

"A major impact on fleet businesses is, of course, the rising cost of fuel. MiX Telematics solutions are proven to bring about an average of 10% savings on fuel costs – often equating to millions in savings for our customers."

A world-class Software-as-a-Service platform

TRACKING

MiX Fleet Manager provides customers with a real-time view of their assets' current positions. They are also able to see whether an asset is moving or stationary and which driver is driving which vehicle. The innovative software platform displays other useful information such as speed, driving direction, ignition status, driving violations and a trail of where the asset has been. Tracking through MiX Fleet Manager fully equips customers to efficiently and effectively manage their fleet, boosting performance levels.

LIVE INFORMATION STREAMS

MiX Fleet Manager promotes proactive monitoring through live streams of information. These live information streams are user-defined and contain information about events and messages to and from assets and/or drivers. A stream can be 'undocked' and kept open, regardless of where the user navigates to in the application. Fleet managers derive great value from live information streams, as they enable real-time management and immediate action to be taken.

REPORTING

A range of reporting and analytics tools are available through MiX Fleet Manager. Fleet managers are able to analyse their fleet in detail, based on user-defined selections. Driver behaviour and fuel consumption, for example, can be effectively managed using the relevant reports. Reports available include asset movement reports, movements into and out of locations, driver scoring, event violations and cost analysis reports.

"MiX Telematics operates out of five top tier data centres and boasts 99.96% uptime. We offer our customers 24/7/365 monitoring of their mobile assets."

A TRUSTED AND PROVEN PARTNER

"Working with MiX Telematics was a decision taken to standardise tracking and the reporting for the group. This has enabled SPAR to reduce speeding events and excessive idling, which has had a positive effect on fuel efficiency and at the same time enables us to highlight driver training requirements. We are very pleased with the results being achieved and the potential going forward."

"A trial for Lucien Kunegal (LK) Group in France demonstrated savings of around €28, 000 per year for the Schmitt (Eurotours) business unit of 40 buses. Also, drivers greatly valued the new "smooth driving" practice, and consider the solution as an important improvement in their working conditions. The solution, implemented in partnership with channel partner Sirac, is today fitted in 350 buses."

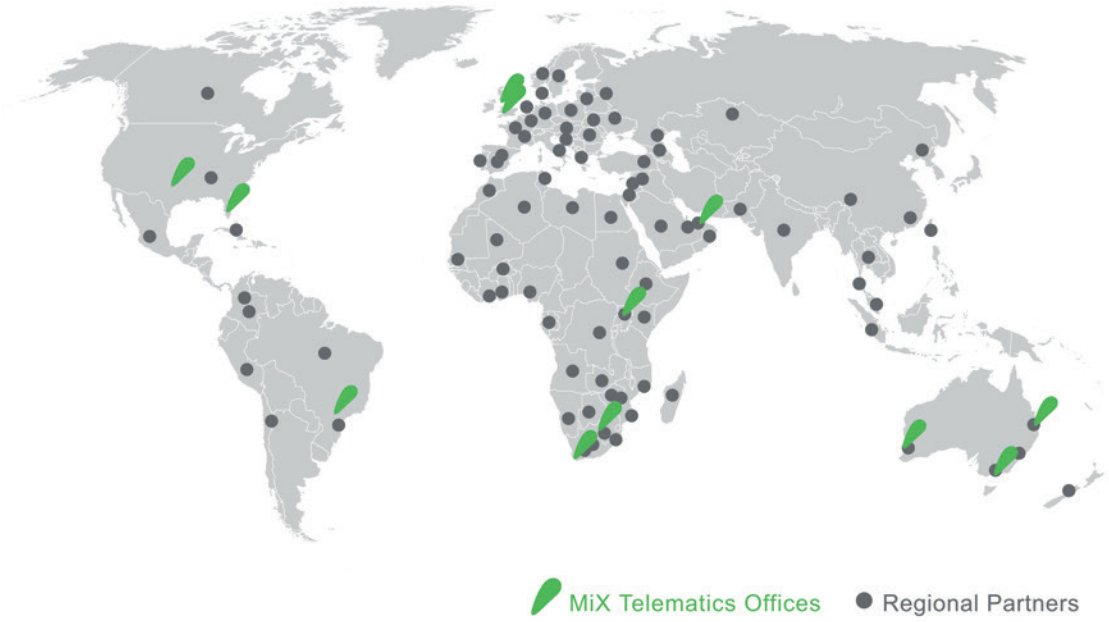
"MiX Telematics conducted a long-term trial with bus operator Sylter Verkehrsgesellschaft (SVG) from Germany. The trial revealed a net saving of 2,200 Euros per year per vehicle, along with a 10% improvement in fuel efficiency."

"A large Oil & Gas customer in the Middle East achieved a 72% sustained improvement in driver behaviour only six weeks after installing a MiX Telematics fleet solution – as well as a 15% reduction in fuel costs within 12 months."

"MiX Telematics monitors 4,000 buses for the Go-Ahead Group in the United Kingdom. Over the course of the long-term contract, the bus operator's fuel efficiency has been improved by 12%, while their accidents have been reduced by 17.6%."

"MiX Telematics products and services are designed to actively manage mobile assets, from trucks and buses to vans, cars, motor bikes and trailers. At any given moment, our customers are either enhancing their safety, reducing their risk, becoming more profitable or lessening their impact on the environment."

OUR GLOBAL PRESENCE



About MiX Telematics

MiX Telematics is a leading global provider of fleet and mobile asset management solutions delivered as Software-as-a-Service, or SaaS, to customers in over 120 countries. The company's products and services provide enterprise fleets, small fleets and consumers with solutions for safety, efficiency and security. MiX Telematics was founded in 1996 and has offices in South Africa, the United Kingdom, the United States, Uganda, Brazil, Australia and the United Arab Emirates as well as a network of more than 130 fleet partners worldwide. MiX Telematics shares are publicly traded on the Johannesburg Stock Exchange (JSE: MIX) and on the New York Stock Exchange (NYSE: MIXT).
